

Samsung Mobile Sales Dashboard | Power BI Project

Project Overview

This Power BI dashboard provides a complete sales analysis of Samsung mobile sales data. The dashboard helps track sales performance, customer ratings, payment methods, brand performance, and regional sales insights through interactive visualizations and KPI cards.

Dashboard Highlights

- Total Sales Performance Analysis
 - Quantity & Transaction Tracking
 - Brand-wise Sales Comparison
 - Mobile Model Sales Analysis
 - Customer Rating Insights
 - Payment Method Distribution
 - Monthly Units Sold Trends
 - City-wise Sales Mapping
 - Interactive Filters & Slicers
-

Key KPIs

- **Total Sales:** 769M
 - **Quantity Sold:** 19K
 - **Transactions:** 4K
 - **Average Sales:** 40K
-

Visualizations Used

- KPI Cards
- Line Charts
- Donut Charts
- Funnel Charts

- Map Visualizations
 - Interactive Tables
 - Slicers & Filters
-

Interactive Features

The dashboard includes multiple interactive slicers that allow users to filter data based on:

- Year
- Mobile Model
- Payment Method
- City
- Day Name
- Brand

These filters help users explore sales performance and customer behavior more efficiently.

Business Insights

- Apple generated the highest total sales among all brands.
 - UPI payments contributed the highest share of transactions.
 - iPhone SE recorded strong sales performance among mobile models.
 - Monthly sales trends show peak sales during specific months.
 - Customer ratings indicate strong user satisfaction levels.
-

Tools & Technologies

- Power BI
- DAX
- Power Query
- Data Cleaning
- Data Visualization

- Business Intelligence

Skills Demonstrated

- Data Analysis
- Dashboard Design
- Sales Analytics
- Interactive Reporting
- KPI Monitoring
- Business Intelligence
- Data Visualization

Conclusion

This Samsung Mobile Sales Dashboard helps businesses monitor product performance, analyze customer preferences, and improve decision-making through interactive and data-driven insights.
